The work follows the Linnaean system with indexes by genus and species. Much of his work in Indochina was involved with native drugs; this was because of the difficulty of procuring European medicines in that region at that time.

The finest work on Stapelia ever produced. Francis Masson (1741-1805) was a Scottish botanist, gardener and Kew Garden's first plant hunter. He first visited South Africa in 1772. Later, in 1785 he set sail again for the Cape of Good Hope, arriving in 1786. There he remained for nearly 10 years, returning to England in 1795. He then took up residence in Kensington and began working on 'Stapeliae Novae'. Masson humbly noted 'The figures were drawn in their natural climate, and though they have little to boast in point of art, they possibly exhibit the natural appearance of the plants they represent, better than figures made from subjects growing in exotic houses can do.' Miss Mia Karsten, who wrote for the 'Journal of South African Botany' observed that Masson's 'Stapeliae Novae' is 'a work of great merit and value, both for the accurate, true to life drawings, from which the plates were made, and the detailed descriptions of the plants figured'.

A previous owner has pasted in an article (to both front and rear paste-downs) published by the Edinburgh University Philosophical Society. Some of it has been removed but it can be dated to c.1870. The article details the proceedings of the first session of the Edinburgh University Philosophical Society, and talks about the session being brought to a close by Sir Alexander Grant and it states '[Grant] rejoiced to see that the present day afforded indications of the lively interest felt throughout the country in the great questions of philosophy. During the few weeks that have elapsed (he proceeded) since you did me the honour to invite me to address you, three important works have appeared. I will name them in the order they came [out]. They are Mr. Darwin's 'Descent of Man'....'. Sir Alexander Grant, 10th Baronet (23 September 1826 - 30 November

1884) was a British educationalist and principal of the University of Edinburgh. He was born in New York and died in Edinburgh. A few other pages, at the catalogue section of the volume, have extracts from contemporary journals / newspapers pasted onto them. Further, on the verso of the title page there are the hand-written notes detailing a previous owner's objections to Darwinism of which there are seven quite detailed points. There are also other annotations in pencil and ink to some parts of the volume. One other article entitled 'Man and Evolution' written by Alfred Russell Wallace, which he presented to the editor of the Daily News, has been tipped onto page 338. A fascinating copy of this work which has clearly been appreciated, challenged and understood by a very early owner.

Frederick J Waydelin, dedicated egg collector, came to write this book, completing it in a typed version in 1944; but it remained unpublished. He became interested in birdnesting as a schoolboy in the late 19th century. Over the following few years, he became increasingly interested in egg collecting. Waydelin was admitted to the British Ornithologists' Union in 1920, but his membership was shortlived, and his resignation in 1922 may well have been connected to his egg collecting exploits. Later in the mid 1930s he ceased egg collecting and rejoined the B.O.U. (1934), but again his membership was shortlived and he resigned for the second time in 1936. An interesting historical account.

It is fair to say that the Golden Eagle and the White-Tailed Sea Eagle have always commanded a special interest for British field ornithologists. The majesty of these splendid birds, plus the romance of their habitat ensure this. This work from Peregrine Books offers not only information on the status of both species, with chapters on identification, the eyrie, eggs, persecution etc., but also delves into historical literature now virtually unobtainable, including material from such authors as John Wolley, Robert Gray and several others.
